

# MANIPAL INSTITUTE OF TECHNOLOGY

MANIPAL  
(A constituent unit of MAHE, Manipal)

## B.Tech. COURSE PLAN

### Theory Course

|                           |                           |   |                      |      |  |
|---------------------------|---------------------------|---|----------------------|------|--|
| Department:               | BIOTECHNOLOGY             |   |                      |      |  |
| Course Name & code:       | BIOINFORMATICS & BIO 3151 |   |                      | Core |  |
| Semester & branch:        | V SEM                     |   | B.Tech Biotechnology |      |  |
| Name of the faculty:      | Dr S Balaji               |   |                      |      |  |
| No of contact hours/week: | L                         | T | P                    | C    |  |
|                           | 3                         | 1 | 0                    | 4    |  |

### COURSE OUTCOMES (COs)

| At the end of this course, the student should be able to: |                                                                       | No. of Contact Hours | Marks |
|-----------------------------------------------------------|-----------------------------------------------------------------------|----------------------|-------|
| CO1                                                       | Solve computational problems related to biological data               | 16                   | 30    |
| CO2                                                       | Analyze and interpret molecular data                                  | 12                   | 30    |
| CO3                                                       | Integrate bioinformatics with other disciplines (especially research) | 10                   | 30    |
| CO4                                                       | Apply practical aspects for sequence/structure analysis               | 10                   | 10    |
| Total                                                     |                                                                       | 48                   | 100   |

## ASSESSMENT PLAN

| <b>Components</b>            | <b>In-Semester Assessment Components (ISAC)</b>                    |                                                      |                                                                                                                            | <b>End semester/Makeup examination</b>                                                               |
|------------------------------|--------------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| <b>Duration</b>              |                                                                    |                                                      |                                                                                                                            | 180 minutes                                                                                          |
| <b>Weightage</b>             | 50%                                                                |                                                      |                                                                                                                            | 50%                                                                                                  |
| <b>Typology of questions</b> | Applying; Analysing;                                               | Applying; Analysing;                                 | Applying; Analysing. Evaluating. Creating                                                                                  | Applying; Analysing; Evaluating; Creating                                                            |
| <b>Pattern</b>               | <b>MISAC 1</b><br><b>MISAC 2</b><br><b>MISAC 3</b><br><b>FISAC</b> | 05 marks<br>30 marks<br>05 marks<br>10 marks         | To decide by the Faculty. May be Surprise assignments, Quiz, Take home assignments, Seminar, Mini project, Assignment etc. | Answer all 5 full questions of 10 marks each. Each question may have 2 to 3 parts of 3/4/5/6/7 marks |
| <b>Schedule</b>              |                                                                    |                                                      | As per academic schedule                                                                                                   |                                                                                                      |

Students are expected to answer all questions  |

## LESSON PLAN

| L No | TOPICS                                                               | Course Outcome Addressed |
|------|----------------------------------------------------------------------|--------------------------|
| L0   | Teaching methodology & course introduction                           | 0                        |
| L1   | Bioinformatics overview                                              | CO2                      |
| L2   | The Digital code of Life, information theory and biology             | CO1                      |
| L3   | The evolutionary basis of sequence alignment                         | CO2                      |
| L4   | Detecting ORFs, protein Vs nucleotide sequence alignment             | CO1                      |
| L5   | Homology, orthology and paralogy                                     | CO2                      |
| L6   | Conservation, conserved substitution and semi-conserved substitution | CO2                      |
| L7   | Dot plots, scoring matrices                                          | CO1                      |
| L8   | Gaps and Gap penalties                                               | CO1                      |
| L9   | Substitution Matrices: PAM and BLOSUM                                | CO1                      |
| L10  | Introduction to biological sequence databases                        | CO2                      |
| L11  | The Gene Bank database, Flat file, Format and Content                | CO1                      |
| L12  | Database similarity searching: FASTA & BLAST                         | CO1                      |
| L13  | Practical aspects of fine-tuning parameters in local alignment       | CO1                      |
| L14  | Introduction to computational biology                                | CO1                      |
| L15  | Dynamic programming algorithm                                        | CO1                      |
| L16  | Problem Solving: Global and Local alignments                         | CO2                      |
| L17  | Statistical and Biological significance of Alignments                | CO2                      |
| L18  | Multiple Sequence Alignment                                          | CO2                      |
| L19  | PCR Primer Design                                                    | CO2                      |
| L20  | Primer design practical considerations                               | CO1                      |
| L21  | Practical aspect of Sequence Alignment                               | CO2                      |
| L22  | Sequence assembly: Overlap-Layout-Consensus approach                 | CO2                      |
| L23  | Sequence assembly – issues and challenges                            | CO2                      |
| L24  | Sequence repeats and complexity in sequence assembly                 | CO1                      |
| L25  | Problem Solving: Sequence assembly                                   | CO1                      |
| L26  | Graph theory & networks                                              | CO1                      |
| L27  | chemical graphs and amino acid comparisons                           | CO1                      |
| L28  | Walk-path-trail-circuit-cycle; Eulerian and Hamiltonian paths        | CO1                      |
| L29  | Detecting Functional Sites in the DNA (Gene finding)                 | CO3                      |
| L30  | Evaluation of gene finding tools                                     | CO4                      |
| L31  | Secondary structure, HP-lattice model                                | CO3                      |
| L32  | PDB file format                                                      | CO3                      |
| L33  | Motifs and domains; symmetry of proteins                             | CO3                      |
| L34  | Structure of nucleic acids                                           | CO3                      |
| L35  | Molecular visualization tools                                        | CO4                      |
| L36  | Protein structure-function relationships                             | CO3                      |
| L37  | Protein modeling                                                     | CO3                      |
| L38  | Homology modeling: practical aspects                                 | CO3                      |
| L39  | Structure validation: Ramachandran plot and other methods            | CO3                      |
| L40  | Homology Modeling: Applications and Practical aspects                | CO4                      |
| L41  | Evolution                                                            | CO3                      |
| L42  | Synapomorphy, plesiomorphy and symplesiomorphy                       | CO4                      |
| L43  | Phylogenetics on the web, some simple practical considerations       | CO4                      |
| L44  | Morphology based cladogram                                           | CO4                      |

|     |                                                         |     |
|-----|---------------------------------------------------------|-----|
| L45 | Building Phylogenetic Trees (Basics and Steps involved) | CO4 |
| L46 | Phylogenetic software and Tree evaluation               | CO4 |
| L47 | Phylogenetic network                                    | CO4 |
| L48 | Bioinformatics: future aspects                          | CO4 |
|     |                                                         |     |
|     |                                                         |     |
