

What You Get with Impartus

One platform for every recorded lecture — built so revision is quick and offline access is effortless.

Pre-Recorded Lectures

Every class is captured and published online, so you can watch or catch up anytime, anywhere.

Multiple Views & Slides

Switch instantly between the board view, speaker camera, and slide view — all perfectly synced.

Backpack

Download lectures into your personal Backpack for offline viewing when data or network is limited.

Easy Revision

Rewind, replay, and search inside lectures to revisit tricky topics before tests and exams.

GETTING STARTED

Two Ways to Access Impartus

Both paths lead to the same place — your Impartus dashboard. Use whichever is easier for you.

METHOD A

Via Manipal LMS (Single Sign-On)

Go to lighthouse.manipal.edu and sign in with your MAHE Microsoft account — no separate Impartus password needed.

OR

METHOD B

Direct Impartus Portal

Go to impartus.manipal.edu/lcs/login and sign in with Microsoft, or with the Impartus username & password emailed to you.

Your Dashboard — Enrolled Subjects

- Whichever method you used to sign in, you land on the same Impartus home screen.
- The left panel lists every subject and lecturer you're enrolled with.
- "Continue Watching" picks up right where you left off on your last lecture.

Browse Lectures by Subject

- Click any subject card to open its full lecture library.
- Recordings are listed in chronological order, newest first.
- Each thumbnail shows the lecturer's name, topic, date, and view count.

Watch, Switch Views & Learn

- Click any lecture thumbnail to start playback immediately.
- Multiple views (board, speaker camera, slides) sit side by side — switch with a single click.
- Audio stays perfectly synced no matter which view you're watching.

The video player displays a lecture on Boolean algebra. The lecturer is standing next to a blackboard with the following content:

$$AB(C+E) + ABC + \bar{A}\bar{B}\bar{C} + B\bar{C}(A+\bar{A})$$

$$ABC + A\bar{B}\bar{C} + A\bar{B}C + \bar{A}\bar{B}\bar{C} + A\bar{B}C + \bar{A}\bar{B}C$$

$$ABC + \bar{A}\bar{B}\bar{C} + A\bar{B}C + \bar{A}\bar{B}C$$

$$= \sum m(1, 6, 5, 2)$$

$$= AC + \bar{B}\bar{C}$$

The Karnaugh map on the blackboard is a 4x4 grid with variables A, B, and C. The map shows the following values:

	00	01	11	10
A	0	0	1	3
	0	0	0	2
	4	0	1	5

The projector screen displays the following content:

KARNAUGH MAP

PROBLEM : Reduce the following Boolean expression using K-map:

$$f = AB + AB'C + A'BC' + BC'$$

Soln. The given Boolean expression is not in SOP form.

$$f = AB(C + C') + AB'C + A'BC' + BC'(A + A')$$

$$= ABC + ABC' + AB'C + A'BC' + ABC' + A'BC'$$

$$= ABC + ABC' + AB'C + A'BC'$$

$$= \sum m(7, 6, 5, 2)$$

Ans. $f = AC + BC'$

> Simplify using 3-variable K-map

School of Electrical Engineering, MIT, Manipal

The video player interface at the bottom shows a progress bar at 00:12:20, a timestamp of 01:00:01, and various playback controls including play/pause, next, previous, and volume.
